ALEXOR V1.02 Software Release

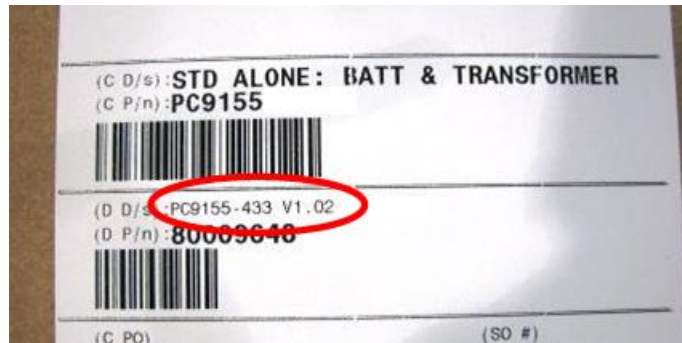

Please be advised that the ALEXOR PC9155 control panel software version has been upgraded from V1.01 to V1.02. The new V1.02 software supports a revision to the Contact ID identifier for the Partial Closing reporting code.

Section [382] Option [1] – The 'Contact ID Partial Closing Identifier is 4/5' toggle option has been removed from the control panel. This feature is now hardcoded OFF so that the PC9155 will always transmit a '4' as the Contact ID identifier for the Partial Closing reporting code.

How to quickly identify the V1.02 software:

- By the version code on the master carton label, product carton label and the product label located on the back of the PC9155 plastic housing:

1 - Master Carton Label

2 - Product Carton Label

3 - Product Cabinet Label – on the back of housing
